Residential - Commercial - Industrial

ABOUT ECO BLOCK

The Best Form for Any Function

Insulating Concrete Forms (ICFs) represent one of the fastest-growing sectors in the construction industry today. ICFs are hollow blocks or panels made of Expanded Polystyrene (EPS) that a construction crew stacks to create the exterior walls of a residential or commercial building. Workers then add reinforcing steel and fill the gap (typically 101mm to 203mm) between the two layers of foam with concrete. This combination of concrete, steel and foam creates a very strong and energy-efficient structure. After the concrete has hardened, the forms stay in place and become the insulation for the walls.

The Benefits of ECO-Block ICFs:

- **Environmentally Friendly:** Use of wood products in construction significantly reduced.
- **Energy-Efficient:** Provides superior insulation, reducing heating/cooling costs and creating a virtual air/vapor barrier.
- **Sound-Suppressing:** The interior rooms are effectively shielded from outside noise.
- **Quickly Constructed:** One house per day with a

Forde Display Home Now Open

Opening Hours

Saturday and Sunday 11am to 5pm

15 Francis Forde Boulevard,
Forde

A member of our Sales and Marketing team will be in attendance at the display home and are available, by appointment only, to discuss your building requirements with you.

- four-man crew.
- **Extremely Strong:** Walls are "cast-in-place," monolithic, reinforced concrete.
 - **Versatile:** Any interior or exterior finish can be applied.
 - **Fire-Retardant:** Up to a four-hour Fire Resistive Rating.

ECO-Block is the world's most advanced ICF technology:

- **Less Expensive:** Reduced EPS molding and manufacturing costs.
- **Stronger:** Superior strength during the crucial period of the concrete pour.
- **More Versatile:** Same side panel for 101mm to 300 mm or larger ICF form.
- **Easier and Cheaper to Transport:** Components allow assembly on site, therefore allowing more components to be transported at once.

Green Materials and Manufacturing

From the initial manufacturing of our ICF product to the construction site to finished structure, ECO-Block has designed its system and process to be kind to the environment. No CFCs, HCFCs or other ozone-depleting substances are used or released. Manufacturing and construction waste is minimal. Plus, ECO-Block forms are 50 percent more efficient to ship and handle than other ICFs.
